SUPPLEMENTAL MATERIALS

This file provides information on where to obtain the supergraph search program and datasets, as well as instructions on how to run the program to reproduce the experimental results reported in the paper.

Code Used in the Experiments:

The code used in the experiments is available for download from the following link.

CodeTree: https://github.com/KG-CodeTree/CodeTree2027
IDAR: https://github.com/SNUCSE-CTA/IDAR/tree/main/src
VEQ: https://github.com/SNUCSE-CTA/VEQ_S

Datasets Used in the Experiments

The datasets used in the experiments are available for download from the following links.

Datasets: https://github.com/SNUCSE-CTA/IDAR/tree/main/datasets
Queries: https://github.com/SNUCSE-CTA/IDAR/tree/main/querysets

How to Run CodeTree

CodeTree can be executed using the following command. Before executing the command, please assign the same edge label to all edges in both the dataset and the queries. This is necessary because VEQ does not support edge labels. Although CodeTree and IDAR support edge labels, all edge labels must be set to the same value to ensure a fair comparison among the three methods.

java -jar codetree.jar [filename for a dataset] [directory for queries]

ex) java -jar codetree.jar datasets\exp1\AIDO\AIDO_1-20_10k.igraph querysets\exp1\AIDO_101-
